

## Fact Sheet CargoBeamer AG

**Year Founded** 2003

**Business** CargoBeamer is a logistics service provider offering a unique system in intermodal transport. The company offers transport services for all semi-trailers on specifically designed wagons (“JetModules”), which can be loaded either in innovative automated terminals (“GateModules”) or by using conventional crane technology.

Today, only 15 percent of the entire road cargo transport can participate in combined road/rail transport due to technical constraints. CargoBeamer changes this profoundly as the technology allows transshipment for all kinds of semi-trailers - without any technical modifications - onto the rail wagons.

Compared to conventional road transport of semi-trailers by truck, the technology reduces emissions by up to 70 percent and energy consumption by up to 60 percent.

CargoBeamer has started to build up a European network of cargo terminals to service major cargo routes throughout the continent.

**Technology** The transshipment process in the company’s terminals is fully automated and parallel, fast and cost-efficient with two major phases:

### 1. Delivery and pick-up of semi-trailers

Road trucks arrive at the CargoBeamer Gate and place semi-trailers into special loading palettes - without the need for train presence. The trucks then immediately pick up previously arrived trailers for delivery to their final destination. Drivers hereby do not need to wait for trains or cranes and vice versa - maximizing efficiency for customers.

### 2. Parallel and automated transshipment

The train arrives and the semi-trailers are unloaded and loaded. Due to the parallel and fully automated transfer process, the entire unloading and loading process is reduced to only 15 minutes. After visual inspection, the train is ready to depart approximately just one hour after arrival.

**Business Areas**

- CargoBeamer technology development
- Manufacturing of system components (wagons and terminals)
- Operation of the “CargoBeamer eLogistics” information & booking system
- Support for system operating partners - maintenance, consulting

**CargoGates**

In addition to CargoBeamer’s home terminal in Leipzig (Germany), the following terminals are currently in the implementation phases:

- Hagen (Germany)
- Calais (France)
- Legnica (Poland)
- Mockava (Lithuania)

**Executive Board**

Hans-Jürgen Weidemann, CEO, CargoBeamer AG  
Imad Jenayeh, Mgmt. Director, CargoBeamer Terminal GmbH  
Juan Nagel, Mgmt. Director, CargoBeamer Intermodal Operations GmbH

**Supervisory Board**

Fritz Merk, Chairman

**Headquarters**

CargoBeamer AG  
Werkstättenstr. 4  
04319 Leipzig  
Phone: +49 341 652358-0  
Fax : +49 341 652358-29
